Security Assessments

Modern organisations operate in environments where a single weakness can lead to significant business disruption. Security Assessments help expose blind spots across applications, networks, and identity systems before adversaries discover them. These evaluations focus on real-world attack behaviours, uncovering both technical flaws and misaligned security controls. The outcome is a clear view of the organisation's true risk posture and a practical direction for strengthening defences with confidence. SafeGrey brings a balanced approach that helps teams understand exposure, prioritise what matters, and build resilience without slowing operations.

 Web Application

 Web Application

Web Application Assessment

Web applications often become the first point of contact for attackers due to their accessibility and business value. This assessment examines how the application handles user interactions, data flows, and trust boundaries, highlighting weaknesses that may allow unauthorised access or misuse. By analysing logic paths, session handling, and behaviour under unexpected conditions, it uncovers risks that traditional reviews often overlook. The findings give teams a clear, prioritised plan to strengthen the application and prevent exposure that could impact operations or user trust.

- Detailed Logic & Flow Inspection
- High-Value, Low-Noise Findings
- Strong Focus on Real Attack Paths
- Clear Business Risk Breakdown
- Structured Fix Recommendations

What's Included

- Analysis of access control, session management, and identity handling
- Review of input handling, error behaviour, and data exposure points
- Mapping of logic flaws, bypass opportunities, and misuse scenarios
- Evaluation against common exploitation methods and industry benchmarks
- Reporting with prioritised remediation guidance

✦ Advanced Security Testing

Security Posture Assessment

Understanding how your organisation responds to threats requires more than technical testing. It demands insight into behaviour, processes, and real-world preparedness. Security Posture Assessments reveal how well teams, controls, and systems hold up when faced with targeted attacks or deceptive scenarios. These assessments expose gaps in response workflows, monitoring effectiveness, and internal security awareness. The outcome is a clear picture of your organisation's current readiness and practical steps to strengthen detection, decision-making, and overall security maturity.

Phishing Campaign

Mystery Guest

Assumed Breach

Traditional Red Team

Phishing Campaign

Phishing Campaign

Phishing remains one of the most effective entry points for attackers, exploiting human behaviour rather than technical flaws. This assessment measures how employees react to deceptive emails, links, and requests crafted to mirror real attack patterns. The campaign helps identify behavioural gaps, high-risk user groups, and weaknesses in internal awareness. The insights provide a clear direction for improving training, reducing exposure, and strengthening organisational readiness against social engineering threats.

• Behaviour-Focused Assessment

• Realistic and Customised Scenarios

• Clear User Risk Segmentation

• Insightful Trend & Response Analysis

• Actionable Awareness Improvements

✓

What's Included

• Deployment of tailored phishing scenarios based on industry relevance

• Measurement of click-through, credential submission, and reporting behaviour

• Identification of high-risk users and recurring patterns

• Analysis of user responses, escalation choices, and awareness gaps

• Reporting with targeted training and mitigation recommendations

✦ Cloud Security Excellence

Cloud Security

Cloud environments evolve quickly, and even small configuration gaps can create serious exposure. Cloud Security Assessments focus on understanding how identities, workloads, networks, and data are managed across your cloud platforms. The goal is to uncover weaknesses that arise from misconfigurations, overly permissive access, unmanaged resources, or insecure deployment practices. These reviews provide clarity on hidden risks, highlight improvement areas, and help organisations build stronger, more controlled cloud foundations without slowing operational agility.

Cloud Infrastructure

Container Security

Kubernetes Security

☁ Cloud Infrastructure

Cloud Infrastructure Security Assessment

Cloud environments often contain hidden risks created by identity misconfigurations, exposed services, and permissive policies. This assessment reviews how your cloud workloads, networks, and data are structured, identifying gaps that could allow unauthorised access or unintended exposure. It examines IAM, storage, networking, monitoring, and deployment controls to pinpoint weaknesses that matter most. The outcome is a clear understanding of your cloud risk footprint and the improvements needed to strengthen security without slowing operations.

- Identity & Access Path Review
- Misconfiguration & Exposure Detection
- Strong Visibility into Cloud Risks
- Architecture & Control Evaluation
- Clear, Prioritised Remediation Steps

✔ What's Included

- Assessment of IAM roles, policies, and trust relationships
- Review of storage permissions, encryption controls, and data access paths
- Evaluation of network configurations, security groups, and public-facing assets
- Inspection of logging, monitoring, and alerting coverage across cloud services
- Reporting with structured guidance aligned to cloud security best practices

✦ Proactive Security Operations

Managed Security Services

Security operations demand constant attention, and many organisations struggle to maintain the visibility and expertise needed to stay ahead of evolving threats. Managed Security Services provide continuous monitoring, rapid detection, and structured response support, ensuring that risks are addressed before they escalate. These services strengthen day-to-day security operations by combining skilled analysts, proven processes, and reliable visibility into what is happening across your environment. The result is a more controlled, informed, and resilient security posture without the overhead of managing everything internally.

Security incidents often begin with subtle indicators that are easy to miss without continuous monitoring. SIEM Monitoring & Threat Detection provides round-the-clock visibility into logs, events, and behavioural patterns across your environment. By identifying suspicious activity early, this service helps prevent small anomalies from turning into serious compromises. The goal is to ensure that threats are detected quickly, escalated appropriately, and addressed with clear guidance, giving organisations stronger control over their operational security.

- ## Service Features

✦ Governance & Compliance

Risk Management

Strong governance and compliance are essential for maintaining trust, meeting regulatory obligations, and ensuring long-term operational stability. Risk Management services help organisations understand where their controls stand, how well policies align with industry requirements, and which areas need improvement. These assessments evaluate people, processes, and technical safeguards to confirm whether the organisation is prepared to meet standards such as ISO, SOC, HIPAA, and GDPR. The insights support clearer decision-making, reduced compliance exposure, and a more structured approach to managing risk across the business.

ISO 27001

HIPAA

GDPR

SOC 1/2

ISO 27001

ISO 27001 Consulting

Achieving ISO 27001 compliance requires a clear understanding of how information is managed, protected, and governed across the organisation. This consulting service guides teams through the entire certification journey, evaluating current practices, identifying gaps against the standard, and building a structured roadmap for implementation. The focus is on creating practical controls, policies, and processes that support sustained compliance rather than short-term checklists. Organisations gain confidence in their readiness and a repeatable framework for maintaining certification year after year.

- End-to-End Certification Guidance
- Gap Analysis & Control Mapping
- Policy, Process & Framework Support
- Practical, Sustainable Recommendations
- Clear Path to Audit Readiness

✔ What's Included

- Assessment of current information security management practices
- Gap analysis against ISO 27001 requirements
- Development or enhancement of policies, controls, and procedures
- Support for risk assessments, SoA creation, and ISMS documentation
- Guidance throughout pre-audit and audit preparation

✦ Operational Security Support

Security Enablement Services

Organisations often struggle to maintain the skills, resources, and continuous oversight needed to stay ahead of evolving threats. Security Enablement Services provide ongoing support, specialised expertise, and purpose-built tools that strengthen operational capability throughout the year. These services help teams address talent gaps, improve defensive maturity, and gain consistent access to actionable security insights. With flexible models and practical guidance, organisations can scale their security efforts without the

burden of managing everything internally.

Security Subscriptions

Security Subscriptions provide ongoing defensive support designed to keep organisations informed, prepared, and consistently improving. Instead of one-time assessments, this model offers continuous visibility into vulnerabilities, misconfigurations, and shifts in security posture. Each cycle delivers expert analysis, scheduled reviews, and clear recommendations tailored to your environment. The result is predictable, year-round oversight that helps reduce exposure and ensures your security practices evolve with emerging threats.

- Ongoing Security Visibility
- Predictable Monthly or Yearly Coverage
- Expert-Led Reviews & Recommendations
- Consistent Posture Improvement
- Flexible Subscription Options

What's Included

- Regular security posture reviews and targeted assessments
- Monthly/quarterly advisory sessions with security experts
- Analysis of new vulnerabilities and environment-specific risks
- Prioritised remediation and improvement guidance
- Continuous support throughout the subscription period

Advanced cybersecurity solutions that protect your business before threats become breaches.
